Jorge Pizarro Callejas

Software Engineer | DevOps & Cloud (AWS) | Linux

Quilpué, Chile | (+56) 976247629 | jpizarrocallejas@gmail.com | linkedin.com/in/jorgepizarrocallejas | github.com/jorgicio

PROFESSIONAL SUMMARY

Software Engineer (B.Eng. in Computer Science, UTFSM) with a web and software development career since 2011 and 3+ years building and operating services on AWS (Lambda, CloudFormation) with CI/CD on Jenkins and GitLab. At Tranciti, I built serverless microservices for a GPS geolocation platform, automated deployments, ran the 24/7 emergency operations line, and upgraded a route-monitoring mobile app to Android 12+. What sets me apart is sysadmin-level Linux: it is my daily driver, I am familiar with many distributions, and I have maintained a Gentoo package repository. I am looking to join a DevOps and Cloud team.

KEY ACHIEVEMENTS

- Cut deployment time by 40% through Jenkins automation and reduced production errors by 25% with Docker and code quality tooling.
- Upgraded a real-time route-monitoring app to Android 12+ despite obsolete dependencies and sparse documentation.
- 24/7 emergency line ("red telephone"): resolved an early-morning outage of the real-time vehicle reporting service and trained the on-call rotation on the protocol.
- Built a WordPress site from scratch and had it live in under a week (Serakin), with 30%+ higher user retention, and cut page load time by 30% on the Kimún platform.

EXPERIENCE

Junior Software Engineer | Tranciti (Waypoint Telecomunicaciones) Oct 2021 – Jan 2025

- Developed microservices and serverless functions with AWS Lambda (Java and Node.js) for a GPS geolocation platform, including an API to communicate with GPS devices; improved efficiency by 30%.
- Implemented infrastructure as code with AWS CloudFormation and automated deployments with Jenkins, reducing deployment time by 40%. Integrated Docker and code quality tools, which lowered production errors by 25%.
- Upgraded the real-time route-monitoring mobile app to the latest Android SDK (Android 12+). Overcame obsolete dependencies, constant framework updates, and sparse documentation, and verified compatibility through testing on a company device.
- Managed the "red telephone" (24/7 emergency line). When the vehicle reporting service went down at 6 a.m., I reviewed the protocol and logs, restarted the service, confirmed the fix with the client, and proposed changes to prevent a recurrence. Trained the rotation on the protocol and on how to classify an emergency.
- Was among the team's strongest Linux users. Wrote scripts to run queries across multiple databases and optimized PostgreSQL and DynamoDB/Athena queries, with up to 20% lower response times.
- Developed a frontend module in Angular for clients and supported mobile apps (Titanium, Ionic, Expo Go) for 5 clients.

Frontend Developer | Innovación y Proyectos Kimun Ltda., Temuco Dec 2019

- Redesigned components of the "Mundo de Vegetales" site, such as the navigation bar, applying color psychology in CSS. Improved usability, increased retention by 20%, and helped establish the site's design framework.
- Optimized site loading by removing unnecessary elements and refactoring code to reduce load cycles: 30% shorter load time.
- Analyzed the codebase and delivered reports on its status and recommended procedures, discussed in daily stand-ups.

WordPress Developer | Serakin, Viña del Mar Oct 2016

- Built from scratch, backend and frontend, the website for a physiotherapy center with no web presence: installed it on the hosting with WordPress and had it live in under a week.
- Designed the site around a defined pattern, creating widgets, installing plugins, and building a custom child theme: 30% higher user retention.
- Trained the client's team to manage the site once it was finished.

Earlier Web Development Experience 2011 – 2015

- **Web Developer and IT Team Lead** | Del Puerto Comunicaciones | Jun 2011 – Mar 2014: the IT area was created when I

joined, and I ended up leading it; developed and maintained 5+ client websites (WordPress, HTML, CSS, jQuery).

- **Web Developer** | Oxalix | Mar 2013 – Jan 2014: forms and modules with Python and Django (MySQL), using a more robust and scalable architecture.
- **Web Developer** | Pontificia Universidad Católica de Valparaíso | Sep 2014 – Apr 2015: English-learning system (CONICYT project) with PHP, jQuery, and MySQL; improved user experience by 20%.
- **Frontend Developer** | Everis | Oct – Dec 2015: client dashboard for the Consorcio website with Bootstrap and jQuery.

EDUCATION

B.Eng. in Computer Science (Ingeniería de Ejecución en Informática) | Universidad Técnica Federico Santa María | 2012 – 2015

KEY SKILLS

- **Linux and Systems:** Sysadmin-level Linux (multiple distributions, package repository maintenance) • CLI tools • Git • GitHub • GitLab
- **Cloud and DevOps:** AWS (Lambda, EC2, CloudFormation, CloudWatch, CodeCommit, DynamoDB, Athena, Glue, Redshift, QuickSight) • Docker • Jenkins • CI/CD • SonarQube
- **Languages:** Java • JavaScript (Node.js) • Python • PHP • C/C++ • SQL • TypeScript (intermediate)
- **Frameworks:** Angular • Vue.js • Quarkus • Django • Ionic • Expo Go • Bootstrap • Tailwind CSS
- **Data:** PostgreSQL • MySQL • ETL • web scraping (BeautifulSoup)
- **Data and AI:** Ollama • LLMs (Qwen, GPT-oss, Llama, Deepseek) • Tools and harnesses (Deepseek Harness, Opencode)
- **Methodologies:** CI/CD • automated QA • TDD • DDD • version control • AI-assisted development
- **Differentiator:** Sysadmin-level Linux + AWS serverless
- **Languages (spoken):** Spanish (native) • English (advanced written, intermediate spoken)
